JORDAN DAUDU

Software Engineer Student

+972-(054)-250-8121 jordandaudu@gmail.com Linkedin GitHub

SUMMARY

I am a Software Engineering student at SCE with strong skills in Python, Java, C# and C++. Experienced in OOP, data structures, and problem-solving. Fast learner, adaptable, and motivated to write clean, efficient code while exploring new technologies. I am skilled with GitHub, Jira, and system design. Eager to gain industry experience and contribute to real-world software projects.

EDUCATION

Bachelor of Science (B.S.) in Software Engineering Candidate

SCE - Shamoon College of Engineering

09/2023 - Present

- Rector-President's Award for Excellence
- Certificate of Excellence for High Entrance Scores
- German Israeli Autumn School Exchange Program Participation Certificate
- Score as of the end of year two: 95

P.Eng - Practical engineer in Electronics and Computer Engineering

ORT Colleges

09/2019 - 06/2021

- Studies in the Electronics and Computers major and received a certificate in Electronics and Computers Engineering - Electronic Systems.
- Completed a full technological diploma that includes 10 units in electronics and computers major.
- Final score: 95.

Technological Diploma

ORT

2016 - 2019

- Full technological diploma that includes 10 units in electronics and computers major

EXPERIENCE

Research Assistant

SCE - Shamoon College of Engineering

09/2025 - 10/2025

Worked as a Research Assistant at SCE on a biological data analysis project focused on predicting the age of flies based on movement tracking data. Took over an existing FlyTracking project and developed a deep learning model using PyTorch to analyze motion-based CSV data and estimate fly age groups. Implemented several model iterations, added new biologically relevant features, optimized training performance, and collaborated closely with biology researchers to ensure meaningful data interpretation and reliable results.

- Took ownership of an existing FlyTracking AI project, extending and improving its machine learning pipeline.
- Developed and trained deep learning models (RNN-based) using PyTorch to analyze time-series motion data from CSV outputs (x, y coordinates).
- Engineered and integrated biologically relevant features to improve model accuracy and interpretability.
- Iterated on multiple model versions, optimizing training performance and evaluation metrics.
- Collaborated closely with biology researchers, translating biological insights into machine learning features and validating results against known age labels.

PROJECTS

Dungeons & Dragons-Inspired Java Game

https://github.com/JordanDaudu/Dungeons_And_Dragons

Designed and developed a full-featured Java-based coop RPG inspired by Dungeons & Dragons.

This project challenged me to bring together game design, object-oriented architecture, and multithreading to build a action-based combat system supporting up to 4 players on a dynamic grid map. Each class—Warrior, Mage, and Archer—features unique abilities and stat customization, with evolving enemies, real-time event logging, global world events (like sandstorms and magic waves), and an immersive audio experience.

Nomad Protocol: AETERRA (Unity/C#)

https://github.com/JordanDaudu/Unity-Project-Nomad-Protocol-Aeterra-Showcase

In active development.
A modular top-down 3D shooter where I'm building scalable gameplay systems including weapons and player combat flow, pooled projectiles/impact FX, and enemy AI (melee + ranged) with animation-event driven timing, while continuously improving visuals/polish and maintainable architecture.

SKILLS

Programming Languages / Tools

Java | Python | C++ | C# | GDScript | HTML | Git | Github | Jira | JetBrains | Replit | AI

General Skills

Teamwork | Algorithms | Data Structures | Critical Thinking | Time Management | Object Oriented Programming

LANGUAGES

Hebrew
Native

English
Proficient

French
Proficient
